

The Cherenkov Telescope Array transient and multi-messenger program

Authors: Alessandro Carosi (speaker - University of Geneva)

Alicia López-Oramas

Francesco Longo

on behalf of the CTA collaboration

- In this contribution we highlight the common approach adopted by the CTA Transients physics working group to perform the study of transient sources in the very-high-energy regime.
- We report about preliminary scientific results on the CTA prospects over a wide range of astrophysical transient events in a multi-wavelength and multi-messenger framework.
